## **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mark Russell on September 28, 2004.

The application has been amended as follows:

In claims 15 and 16, please replace formula (I) with the following:

In a conversation with Mr. Russell, it was pointed out that one of the silicon atoms in original formula (I) had five substituents in conflict with the premise that silicon is tetravalent. It was determined that the hydrogen atom should not have been present and Applicant and the Examiner agreed that formula (I) would be amended to remove the additional group by way of Examiner's amendment.

## Allowable Subject Matter

Applicants disclose a method of defoaming an aqueous system that entails adding a polysiloxane-polyoxyalkylene copolymer having a specified structure.

Applicant has furnished three German patent publications all of which teach the same

copolymer. Their United States equivalents, U.S. Patent Nos. 5,446,119, 5474709, and 5,613,988 recommend the utilization of these materials as defoaming adjuvants in organic, non-polar media in direct contrast with the present invention which contemplates their addition to water-based systems. Furthermore, although structurally similar polysiloxane-polyether copolymers have repeatedly been taught in the patent literature as useful materials for defoaming aqueous systems, there simply is nothing offered by the prior art that particularly motivates one of ordinary skill to employ the copolymers disclosed in the aformentioned documents in aqueous media. Indeed, the prior art teaching like copolymers as defoamers in aqueous systems provide, at best, only a "motivation to try" using the materials of the instant invention as defoamers in water-based formulations. Accordingly, claims 1-19 are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marc S. Zimmer whose telephone number is 571-272-1096. The examiner can normally be reached on Monday-Friday 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Randy Gulakowski can be reached on 571-272-1302. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
